Meet Fundy Coast Land Company

Full portfolio of 120,000 hectares

Southern New Brunswick

Split into Districts with local teams to cover planning, GIS, & operations and logistics

We will follow one district team as they...

**FUNDY COAST
LAND CO.**

NORTH YORK DISTRICT

Generate an optimized tactical harvest plan

Push this plan through multiple solutions and into reality

Collect, manage, and present vital data gathered along the way

More specifically...

Data Lake and Dashboards

Planning optimization

Optimize the 5-Year harvest & delivery plan

Operational planning

Refine operating plans and finalize blocks

Operational scheduling

Convert operating plan into operational schedule

Transport & Logistics

Generate digital load slips

Publish the plan to the FMS

Capture inventory with merch cruise

Monitor active harvest blocks

Track delivery and weigh-in

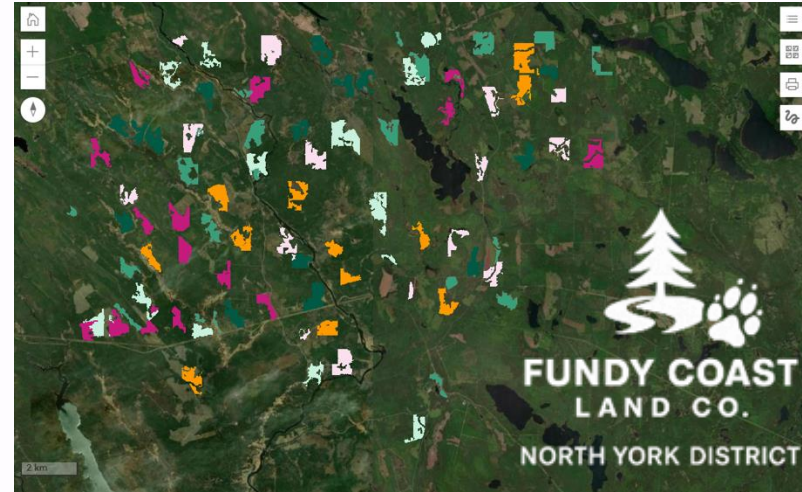

Meet the Team – The North York District

2,420 hectares scheduled

10% of annual harvest volume

3 harvest crews

5-year dataset of **92** harvest units

Meet the Team – The North York District

2,420 hectares scheduled

10% of annual harvest volume

3 harvest crews

5-year dataset of **92** harvest units

The Personas

District Manager

Timber Marketers

Truck Driver

Forest Resource Analyst

Machine Operators

Woodflow Managers

GIS Analyst

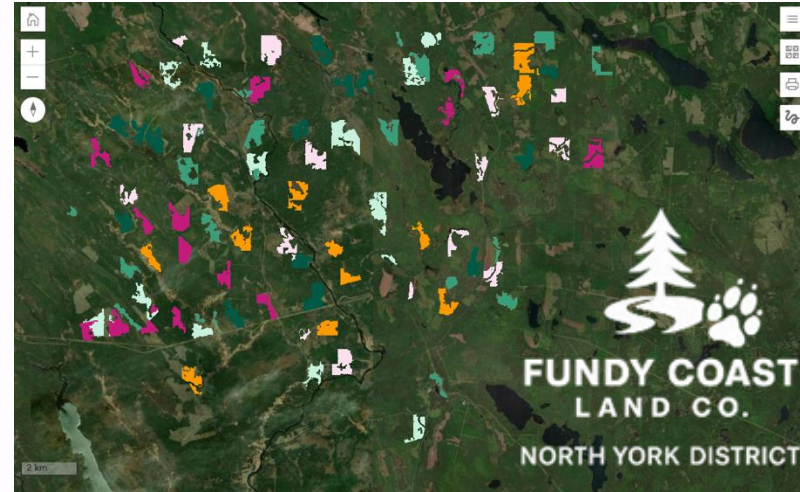

Leadership Team

Field Forester

Operations Manager

Mill Scale Attendant

Information Systems Manager

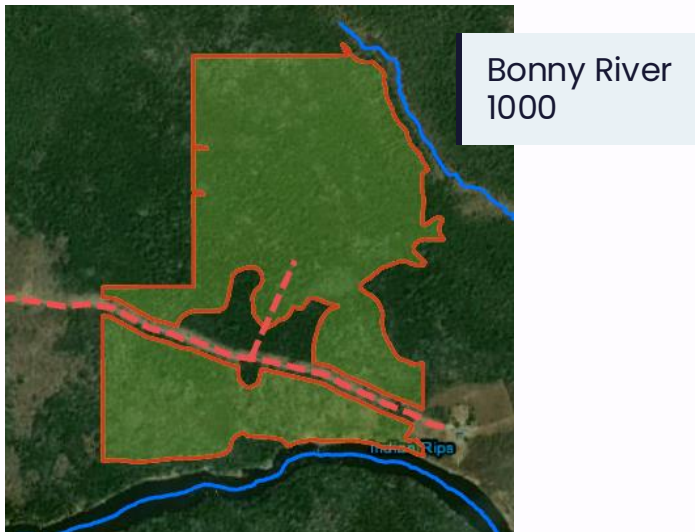

remsoft.

Meet the Team – The Activities

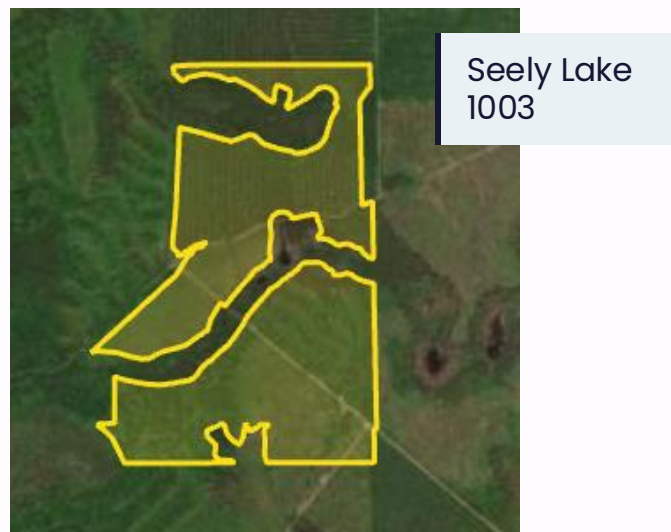

We will revisit two distinct spatial units along the planning process

Activity 1: Planned (2027)

Featured in: optimization, FMS, inventory, operational scheduling

Activity 2: Active (today)

Featured in: optimization, operational scheduling, machine telematics, logistics

Why are they following this process? Why is it important?

Value is created (or lost) in the handoff between planning and operations.

In forestry, every decision affects the next, and misalignment compounds over time.

Even the best plans are tested and reshaped by real-world conditions

The Chapters

01

Tactical
Optimization
and FMS

Woodstock
Next Gen
and Stratus

02

FMS and
Inventory
Collection

Stratus
and Prism

03

Operational
Scheduling

Stratus
